

DCOM for WINDOWS™ Workshop communication

DCom is a simple and powerful solution to manage the communication by serial line between a CNC machine and a computer. Its gravitational purchase price and its simplified installation make of DCom the ideal solution for each company or manufacturer of machines wishing to deliver a turn-key solution of communication to their customers. Compatible with the whole of the Windows™ versions, DCom places at your disposal of the professional tools necessary to prepare, manage and transfer your programs parts and your machines' configuration.

Thanks to the completely configurable parameters of communication and filtering, Dcom is able to communicate with any CNC machine equipped with a serial interface. The many integrated functionalities allow you a perfect adaptation to your needs.

The Dcom kit of communication for Windows™, reference DCM 321, with on-line help in 3 languages is a complete unit including the following accessories :

- 1 program on diskettes 3½"
- 1 3 meters connecting cable RS 232
- 1 adapter 9 poles – 25 poles
- 1 case of connection for CNC Fanuc
- 1 case of connection for CNC Siemens
- 1 licence with releasing key

To convince you of the universality of Dcom, we propose you a version of free demonstration on our Internet site with following address :
